

ENVIRONMENTAL POLICY

FONDALPRESS S.p.A carries out the activity of pressure die-casting aluminium alloys to manufacture castings, that can be mechanical machined and assembled.

The Company, thanks to its leadership, during the performance of its activities engages itself:

- to maintain compliance with laws and the existing regulations in the field of environment, and prevent any possible pollution;
- to pursue the continuous improvement tended to the reduction of the environmental impacts at a level corresponding to the economically practicable application of the Best Available Techniques (BAT), to prevent risks and non conformities;
- to guarantee the fulfillment of the implied and express expectations of the parties through the reliable and effective management of the activities within the continuous improvement;
- to improve in particular its environmental performance respect to the principles of the circular economy with special attention to the rational use and reduction of raw materials, reduction of the energy consumption through on-time monitoring and analysis of environment impact and life cycle.

To this end FONDALPRESS S.p.A ,after having made a deep analysis of the contest of the productive activities carried out by the plants of Castell'Alfero (AT) and Portacomaro Stazione (AT), has identified some priority areas of intervention and sets itself the following targets:

- to pursue the continuous improvement of the Environmental Management System satisfying all the requirements included in the UNI EN ISO 14001- edition 2015 and applying, where possible, complementary patterns to the Quality Management System and to the aspects of health and work safety;
- to disclose to the public and to the interested parties the necessary information to understand the effects on the environment of the activities of the Company, seeking an open dialogue;
- to promote the employees' responsibility at every level towards the environment protection and create information programs and staff training;
- to assure the cooperation with public authorities;
- to know the environmental management of its suppliers;
- to evaluate the introduction into the production process of raw materials and auxiliaries, that have a better environment compliance in respect to those currently in use;
- to evaluate possible new products and potential new markets with full respect of the parties' needs and expectations within the processes and products contest in accordance with the principles of circular economy;
- to estimate in advance the environmental impacts of new processes and of the modifications of the existing installations;
- to prevent and mitigate the impacts of its activities on soil and water;
- to improve the waste management, with particular attention to the dangerous one;
- to enforce the necessary measures, to reduce the environment impacts connected to emergency events.
